

Audit Launch provides unprecedented visibility to the information affecting your Business Objects XI system. Offering enhanced security, data management and email and voice alerts, Audit Launch keeps you updated on what's happening in Business Objects as it happens.

Audit Launch for Security Automation

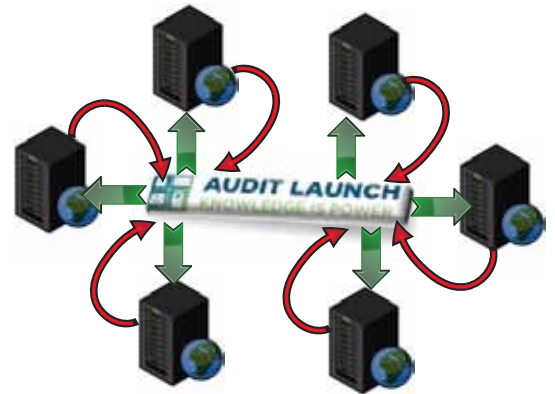

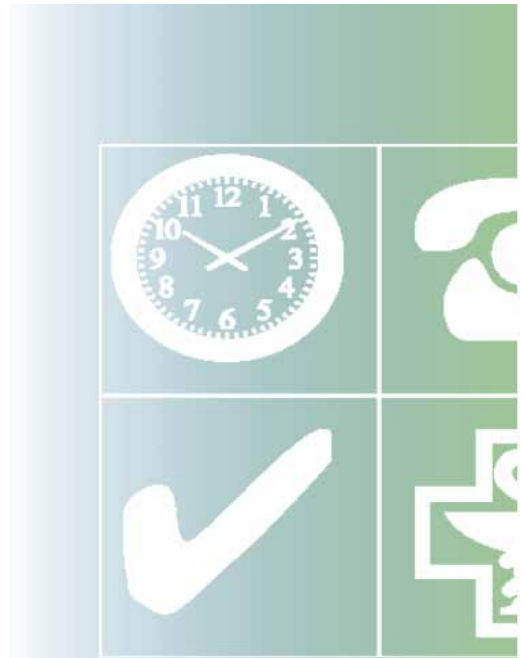

- Automates the synchronization of security from custom application with BOE Security.
- Automatically integrates and refreshes third party security systems without coding into BusinessObjects
- Automates the synchronization of the LDAP and Windows Active Directory security groups into BOE prior to user login.

Audit Launch for Monitoring

- Monitors the Services of Business Objects XI across servers and clusters
- Provides a web based monitoring interface for easy access or inclusion into web applications.
- Server based monitoring with email and voice alerts in a 100% web based interface for use in Unix, Windows and Linux deployments

Audit Launch for Reporting

- Address CMS security questions - Orphaned Users and rights on Universes and Folders
- Address activity questions - By Folder, Universe Folder, or by Group

Audit Launch is your BOE Security Blanket

| Lists of available Servers | | | | | |
|--|--------|-----------------------------------|------------|----------|-------------|
| Name | Kind | Type | Check_serv | Status | Mail Action |
| exststst cms | Server | Central Management Server | 1 | Disabled | HOURLY |
| exststst cms | Server | Central Management Server | 1 | Enabled | HOURLY |
| exststst Desktop_IntelligenceJobServer | Server | Desktop Intelligence Job Server | 1 | Enabled | HOURLY |
| exststst eventserver | Server | Event Server | 1 | Enabled | HOURLY |
| exststst Web_IntelligenceReportServer | Server | Web Intelligence Report Server | 1 | Enabled | HOURLY |
| exststst cacheserver | Server | Crystal Reports Cache Server | 1 | Enabled | HOURLY |
| exststst cacheserver | Server | Crystal Reports Cache Server | 1 | Disabled | HOURLY |
| exststst Desktop_IntelligenceCacheServer | Server | Desktop Intelligence Cache Server | 1 | Enabled | HOURLY |

Monitor every server in your system, Audit Launch is powerful enough to manage them all

Audit Launch greatly reduces the time needed to manage security roles in Business Objects Enterprise. By working beside the Central Management System, Audit Launch provides visibility outside of the Business Objects Central Management Console. The application automatically extends audit information that allows for better managing of the Business Objects Enterprise Infrastructure

About Us

McManus is a leader in developing products for the Business Intelligence community. For over 15 years our teams have listened to the needs of the corporate community and placed the control of data driven decisions in the hands of the organization. With ease of set up, ease of design, and ease of use, the Launch family of products are easily tailored to any company's specific requirements.

Our mission is to simplify the use of information. We not only provide the tools that maximize the reach of business intelligence in real time, but strive to allow companies to make better decisions for themselves, their customers, and the community.
